Town of Raymond NOTICE

TAKE NOTICE that on and after April 15th the Raymond Estray Pound will be in full operation. All animals found at large within the Town limits will be promptly impounded.

R. A. VAN ORMAM, CHIEF OF POLICE

News Notes

Born—To Mr. and Mrs. Joseph Thompson, a daughter.

Born—To Mr. and Mrs. John H. Blackmore, a son.

Born to Mr. and Mrs. S. B. Smith, a son.

Born—To Mr. and Mrs. Ross Larson, a daughter.

Born—To Mr. and Mrs. D. G. Heal, a son.

Born—To Mr. and Mrs. David C. Peterson, a daughter.

Raymond's population is increasing rapidly.

Ben Oliver and family left last Tuesday by auto for Diamond City, where they now reside.

A business deal of some importance was closed last Monday when M. E. Christensen purchased the equipment of Chas. MacKay, Lethbridge undertaker. He will assume control today. Dehlin Bennett has resigned his position at Bennett's store, and will act as assistant to Mr. Christensen.

The U. F. W. A. will hold their next meeting on Thursday, April 7 at the home of Mrs. Wilford Meldrum at 2 p. m.

James E. Meeks suffered a broken collar bone when his horse fell with him last Tuesday. He was taken by Dr. Astrof to the Galt hospital for an X ray and surgical attention.

There was a total enrolment of 150,556 pupils in Alberta public and high schools during 1926, an increase over 1925 of 2,730. Attendance at rural schools show improvement. The demand for secondary education is on the increase and the percentage of pupils continuing through the high schools is higher than formerly.

Thirteen hundred students attended the University of Alberta last year, of which 897 were men and 405 were women.

Hon. J. F. Lymburn, Attorney General, has announced the appointment of George B. Henwood, well-known lawyer of Edmonton, to be Deputy Attorney General, in place of R. A. Smith, resigned. Mr. Henwood has been practising in the province for many years.

The basketball executive and the Union Jacks were entertained at a supper party at the home of Wilford Meldrum last Saturday night.

Constable VanOrman was a visitor to Lethbridge last Monday.

All reserved seats for the big games tomorrow and Saturday nights, Union Jacks versus Winnipeg Toilers, were sold out several days ago. It is evident that the S. R. O. sign will be needed both nights. Biddy Meldrum's broken hand has healed sufficiently for him to resume his old position on the forward line. Everyone has long known that the Jacks have a wonderful team. Just how strong they are will be demonstrated tomorrow night. Total scores of both games will decide the contest.

J. U. Allred, owner of the old Club Cafe building, is having that old structure torn down preparatory to erecting a brick one-story building, 50 x 60 feet, which will be occupied by the new Club cafe and the Raymond Pharmacy. The building contract is not yet let.

Bill Blackmore was a visitor here last weekend.

C. W. Card returned home last Saturday from a winter's visit to Portland and San Francisco.

Jack Mehew has invented, built and patented a device for topping beets. It can be seen at his blacksmith shop, and is well worth examining. It is attachable to an ordinary beet digger, moving in advance of it, and will be tried out this season. Another interesting piece of iron work is an ornamental gate wrought by Mr. Mehew to be used on Ray Knight's new premises.

The local School of Agriculture closed its term last Friday evening when the auditorium was packed to the doors for the closing exercises. Features of the evening were a speech by O. S. Longman and the presentation of a scholarship by T. Geo. Wood, Canadian Sugar Factories, to the winner Edwin Palmer of Barnwell. Refreshments and dancing concluded the evening. The past term has been so successful and the students so enthusiastic that there is no doubt that the school will re-open next fall with a greater attendance than ever.

Name _____ Address _____

Welcome the Newcomer

The immigration season is just opening, and, judging from all reports and present prospects, Canada is due to receive a larger influx of settlers than in any year since the period between 1909 and the outbreak of the war.

This increasing stream of people Canadawards results from a number of factors. In the first place, conditions in Europe are more favorable than they have been since the upheaval caused by the war, and people who have long been anxious to emigrate are better able to do so. Canada, too, has somewhat relaxed the restrictions imposed on immigration following the war and when this country, like all others, was faced with the problem of readjustment and the reestablishment of civilian life and employment of the hundreds of thousands of Canadians whose energies had been devoted to war activities and industries. Until our domestic problems of unemployment and rehabilitation had been solved it was generally considered unwise to allow any large number of new people to enter the Dominion.

The economic and financial situation throughout Canada has likewise enormously improved; employment is now general; great development enterprises are under way; railway and building construction is increasing; trade and commerce is steadily and rapidly expanding.

Agriculture has enjoyed several fairly prosperous years, and, whatever may be the difficulties yet to be overcome, they are being faced and solved, with the result that the Canadian farmer is today in a much better and more hopeful position than his fellow agriculturist in the United States. The Canadian farmer through organization and co-operation has successfully met problems which still confront the United States farmer, and solutions to which he asks Government authorities to provide.

The success of the Western Pools, the steady reduction in taxation, Federal, Provincial and Municipal, decreasing railway deficits, increased railway branch line construction, all are helpful factors in the economic situation, leading to confidence in Canada and encouraging to intending emigrants as providing substantial reasons why they can succeed in this country.

But, as has been stated in this column on more than one occasion, success in emigration is much more important than quantity in immigration. Canada wants more people, no one disputes that fact. But, above all, Canada's future, growth, prosperity and sound national development demands that our immigrants be transformed in the shortest possible space of time into contented, law-abiding, prosperous people, resulting in permanent homes and good citizens.

To achieve this much to be desired end, governments, railways, and organizations of many kinds are doing much and can do more, but, in the final analysis, municipal and school bodies and the individual neighbors of these newcomers can exert the most powerful and helpful influence. Every rural municipal council, every rural school trustee board, should in itself be a small local colonization board, alert and ready to make welcome each and every incoming settler, regardless of his race, creed or circumstances of life.

Present action should make it a part of their duties of citizenship to extend a hearty welcome to their new neighbors, to offer such advice as may be necessary, and give a helping hand in time of sickness or difficulty. These newcomers, if thus encouraged, will become permanent residents. As such they will help to develop the district and the Province. They will bear their share of the tax burden, and thus lighten it for all. Their presence will mean better roads, better schools, and the possibility of modern conveniences now considered out of the question because of cost to the present sparse and scattered population.

The eyes of the world, and especially of Great Britain and the rest of the Empire, will be focused on Canada in this year of its diamond jubilee. Ten or thousands of people will come to make their future homes in this Dominion. The success in the great adventure means everything to them, but it will also mean much to the future of all Canada. No Canadian of today can render greater service to the country than by doing all that lies in his or her power to make immigration to the Dominion this year successful by the conversion of the newcomers, through sane and practical colonization, into permanent settlers and worthwhile citizens, the greatest asset of any country, and the only abiding foundation of national greatness in the truest meaning of the term.

Worked For Livingstone

Man Still Living in Transvaal Tended Sheep for Famous Explorer

Believed to be the last survivor of the pallid, hardy who knew and helped Livingstone in his great work, Lazarus Ralibane still lives, hale and hearty, in the Vervanger district of the Transvaal, Ralibane, whose name is well known for, says he, encountered at a height of 2,000 feet, was born "long ago" in the Protectorate. When about 15 years of age he went to Krumpholtz, where he met Dr. Livingstone, who employed him to tend his sheep and draw water for the household. Records show that Livingstone went to Krumpholtz in 1841. It would, therefore, appear that Ralibane must be in his 100th year. Glasgow Herald.

John—"Have you enough money to buy the water?"
 Rod—"Yes, enough to upset him."

Held Airplane Motionless

Six-ton Bomber Pilot's Feat in Flight Near London

A 6-ton night bombing plane ascending for test from the Cricke wood Aerodrome, London, N.W., was held by its pilot in hover motionless. The machine was a Handley Page and its pilot, Capt. A. S. Wilcockson, encountered at a height of 2,000 feet, was born "long ago" in the Protectorate. When about 15 years of age he went to Krumpholtz, where he met Dr. Livingstone, who employed him to tend his sheep and draw water for the household. Records show that Livingstone went to Krumpholtz in 1841. It would, therefore, appear that Ralibane must be in his 100th year. Glasgow Herald.

Perhaps some people talk to themselves because they find it impossible to interest any one else.

Urges End of Wars

British Envoy to Washington Pleads for Anglo-Saxon Unity

"The goal of unity I want to see grow up among the English-speaking peoples is a unity of heart and understanding," said Sir Esme Howard, British ambassador to Washington in a speech on Anglo-Saxon unity, delivered before the Twentieth Century Club at Washington. "I should like it to be an accepted fact," he added, "in the mind of every man, woman and child in all English-speaking countries that come what may we still will never war with each other—that such a war would be like a duel between brothers—a thing unholy and impious, not to be even thought of."

"If we have to spend large sums on armaments," he said later on, "let us at least do so without reference to the armaments of the other but only considering our own necessities for protection generally. There can be no unity of heart if of purpose if we are going to begin eyeing each other with suspicion every time the other builds a new ship or develops some engine of destruction."

Speaking of conditions in Europe, Sir Esme reproached his hearers that Great Britain could not ignore the conflict in her efforts to preserve Anglo-Saxon unity.

Drives Out Rheumatism

Subdues Lumbago

Brings Ease and Comfort to the Sufferer at Once

NERVILINE

A King Over Pain

Those who seek permanent relief from the grinding pain of Rheumatism and Lumbago should read the letter of E. E. Norman, from Georgetown, who writes:

"I was fairly crippled with aching joints and Rheumatism. Nerviline must have been what I needed, because it cleared up my trouble quickly."

"If you need a reliable, strong, penetrating pain remedy, one you can depend on, get a 25c bottle of Nerviline today; it will make you well quickly."

Alberta Oil Producers

Three different types of oil are being produced in the Turner Valley field near Calgary. Roydine No. 1 and Vulcan are producing naphtha, Illinois-Alberta, gasoline and New New McLaughlin-Segun, crude. The last was producing 100 barrels a day by baling, and a pump is being installed.

CONDITIONS THAT CALL FOR A TONIC

Symptoms That the Blood is Thin Should Not be Neglected

Weak, lacking in strength, energy and ambition, nervous, sleepless, poor appetite, digestion disturbed—these are the symptoms of a great majority of people who have been benefited by the use of Dr. Williams' Pink Pills. The great value of this medicine in cases of this kind is proved by the statement of Mrs. W. Hensler, Kilmarnock, Ont., who says: "Following a nervous condition, I had pains in the back and limbs and could scarcely move about. I did not sleep well at night and was despondent and discouraged. I decided to try Dr. Williams' Pink Pills, and can truthfully say that after the use of six boxes, the change in my condition was nothing short of marvelous. The pains vanished, I slept well, had a good appetite, and in every way felt well and strong. I also gave the pills to my daughter, who was in an anemic condition and feeling quite miserable, and in her case, too, they restored health. I hope my experience may help some other weak person."

Dr. Williams' Pink Pills are sold by all medicine dealers or sent by mail at 50 cents a box by The Dr. Williams' Medicine Co., Brockville, Ont. A little book, "Building Up the Blood," which contains many useful health hints, will be sent free on request.

Liner for Jungle Airway

For a jungle airway from Khar-toum through Central Africa to Kisumu in the Kenya colony, a distance of 1,200 miles, a big triple screw air liner is being designed in England. It will be based on the flying boat built for the Air Ministry which proved to be the fastest in existence. Owing to the presence of rivers, lakes and swamps along the route, it will be possible by using seaplanes to alight at almost any point.

There is one redeeming feature about a chronic borrower; he never strikes a team when he is down. Corns are painful growths. Holloway's Corn Remover will remove them.

As a woman's beauty fades her brain runs to the front.

Ceremonies may differ, but true politeness is the same world over.

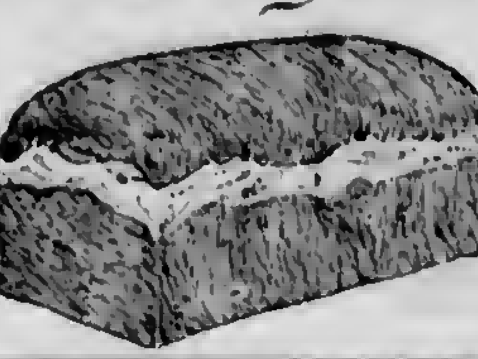

Minard's Liniment for rheumatism.

BAKE YOUR OWN BREAD WITH

ROYAL YEAST CAKES

The standard of Quality for over 50 years

Cancer

After twenty years of practical experience and research, the late Dr. F. W. Forbes Ross, noted cancer specialist, announced, in 1912, that cancer is caused by deficiency of potassium "salts" in the body and if such deficiency is remedied, Cancer, even in advanced cases, will retrograde. Before his death, this eminent English authority abundantly proved the truth of his assertion and, since then, the voluntary testimony of thousands of sufferers who state they have been completely restored has brought justified hope and confidence to countless others on both sides of the Atlantic ocean.

The public is but slowly realizing the unpleasant truth that while scientific refinement deprives all white flour and white sugar of the last trace of potassium, the boiling of our vegetables also destroys the health preserving organic salts which an all-wise Creator originally placed in them and a civilized world, having eliminated its food values, is today consuming what Dr. Forbes Ross described as "muck value minerals." Such diet creates more acids than the human liver can neutralize or dispose of and the consequent in valuable potassium starvation results in rheumatism in any of its varied forms, gout, eczema or any of the maladies caused by potassium deficiency, including ulceration of stomach or other organs which, if not remedied, is liable to degenerate into cancer. In fact, the most practically universal intestinal stasis or constipation of civilization, which in piles, hemorrhoids or beriberis will ever cure, is the certain forerunner of ninety per centum of all humanity's maladies, of which cancer is the most deadly.

When, but not until drastic reform takes place in modern diet, will men and women appreciate their personal ability to avoid not only Cancer, but almost all the prevalent maladies which are actually, it unconsciously, self-inflicted. Till such drastic reform occurs, sufferers will continue to alleviate their individual potassium starvation by taking at home, with their meals, the small discs of The Cancer-killing Treatment which, with fully explanatory literature and interesting case reports, can be obtained from Charles Walter, 51 Brunswick Avenue, Toronto, 4, Ontario, Sole Canadian and U.S.A. representative of The Cancer-killing Company of England.

Alaska may be the land of the mid night sun, retorts the Los Angeles Times, but we don't have to go that far to find the land of the 1 a.m. daughter.

Asthma No Longer Dreaded. The dread of renewed attacks from asthma has no hold upon those who have learned to rely upon Dr. J. D. Kellogg's Asthma Remedy. So safe do they feel that complete reliance is placed on this true specific with the certainty that it will always do all that its makers claim. If you have not yet learned how safe you are with this preparation at hand get it today and know for yourself.

The fiddler crab is so called because the male has one brightly colored claw of immense size, which, when he runs, he waves as if he were playing a violin.

Relieves Indigestion Very Quickly

Men and women all over the world have been taking a small, easy to swallow, purely vegetable pill, after meals, to prevent and relieve attacks of indigestion and sick headache.

Millions also recommend them as a mild, gentle laxative, moving the bowels free from pain and leaving a pleasant after feeling.

These little pills are a doctor's prescription and have been sold by all druggists as

CARTER'S LITTLE LIVER PILLS. They do not contain Mercury, Calomel, or habit forming drugs.

Try them to-night and feel refreshed to-morrow.

All druggists recommend CARTER'S LITTLE LIVER PILLS. Men, women and children take them as a daily regulator.

All Druggists, 25c. and 75c. red packages.

Has Powerful War Weapon

Britain Guards Secret of Mysterious Invisible Searchlight Ray

The British Government is jealously guarding its new war secret, a mysterious invisible searchlight ray which makes it impossible for an enemy to conduct military operations at night unobserved.

It is one of the most formidable war weapons yet discovered, and it was discovered accidentally.

John L. Baird, inventor of the television, and the discoverer of the mysterious ray, accidentally stumbled on the new ray while he was trying to perfect the television apparatus with which he now broadcasts pictures by radio as far as 150 miles.

It belongs to the infrared section of the spectrum outside the range of the human eye. His process is to isolate and use the ray which the human eye cannot see but which is susceptible of being recorded on his secret apparatus.

"By proper adaption of these principles," he disclosed, "it will be possible to see an enemy in the dark when he believes himself to be unobserved."

"So far we are seeing over comparatively short distances, but it has now become simply a question of certain technical improvements and the application of greater power in order to be able to see a person or a scene which is thousands of miles distant from the point where we are looking into the receiving screen."

His associate, Captain O. G. Hinchinson, goes even further. "At night, aeroplanes approaching under the cover of darkness will be disclosed to the defending headquarters by the electric eye of the television. They will be followed by searchlight emitting invisible rays, and as these rays will be in contact by them, they will continue to approach until, without warning, they are brought down by the guns of the defense."

STOMACH MISERY,

GAS, INDIGESTION

"Pape's Diapiesin" Corrects Sour, Upset Stomachs at Once

"Pape's Diapiesin" is the quickest, surest relief for indigestion, gases, flatulence, heartburn, sourness, fermentation or stomach distress caused by acidity. A few tablets give almost immediate stomach relief. Correct your stomach and digestion now for a few cents. Bought in self millions of packages.

Assistance for Gardeners

Articles on Horticulture Are Being Prepared at University of Saskatchewan

To stimulate interest in horticulture in Saskatchewan, and to assist those interested in growing horticultural plants in this province, the department of horticulture, University of Saskatchewan, is preparing a series of short articles on reasonable topics relating to horticulture. This series will include "The Garden Aesthetics," "Planning the Home Garden," "Vegetables for the Home Garden," "Fruits for the Home Garden," "Annual Flowers for the Home Garden," "Perennial Flowers for the Home Garden," and others. The articles will be sent by mail on application to the University.

Explanation is Simple

Talking fatigues women less than it does men, a Finnish scientist says in a dry objective way, without entering into the controversy as to whether the female is more talkative than the male. The scientist explains his statement by two facts: First, that the greater the length of the vocal cords, the more energy is required to produce a sound; second, that the vocal cords of women are shorter than those of men.

A son at college wrote to his father:

"No men, no fun, your son."
 The father answered:
 "How sad, too bad, your dad."

Gores Flea Before It. — There are many who have been afflicted with sores and have driven them away with Dr. Thomas' Eucalyptic Oil. All such trouble should lose no time in applying this splendid remedy, as there is nothing like it to be had. It is cheap, but its power is in no way expressed by its low price.

Eating animal fat, in the form of butter, cream or meat, is now stated to be of great assistance in warding off tuberculosis.

Only one mother of a president of the United States lived to see her son inaugurated—the mother of William McKinley.

Road to James Bay

Ontario is Interested in Development of North Country

There was a hint in the speech from the throne at Toronto that the railway into northern Ontario will be pushed another step toward James Bay this year. The project was not started with a view to opening up an outlet to the northern area, but to open up the country intervening. The results have justified the undertaking and will likely lead eventually to its completion. It was worth building the railway to bring the development that has occurred in the Cobalt country, and the mineralized zone extends north of that district, indefinitely, perhaps even to the shore of the bay.—Edmonton Bulletin.

Publicity As the Basic Factor In Development of Markets for Natural Products of Canada

Publicity as the basic factor in successful salesmanship is receiving an increasingly large measure of attention at this time. The movement is not confined to this continent, where the art of advertising was first cultivated. It has spread to Great Britain and the continent of Europe and before long the world is likely to see a rivalry in that direction that cannot but exert a marked educational effect. Addressing the annual convention of the Fruit Growers' Association of Ontario and the Niagara Peninsula Fruit Growers' Association at Hamilton, when presenting the report of the work of the Canadian Horticultural Council for last year, Mr. E. B. Lake, of Montreal, stressed the importance of an organized campaign of advertising. Voicing the opinion that the Canadian apple was the finest in the world, he pointed out that through advertising, fruit growers could educate the public to eat a baked apple instead of a grapefruit for breakfast. Instead of sending our money out to foreign countries, Canadians should buy their own products. This is sound advice, and the way to give it practical effect is by utilizing in every possible direction the publicity methods that have proved their ability to create gigantic and profitable business enterprises.

Earlier in the year Mr. J. Allan Ross, Canadian manager of the William Wrigley Company, a convincing example of a concern built up and sustained through extensive advertising of a product of defined quality, declared in Toronto that no land nor people is blest with greater dormant riches than Canada. He pointed out that Britain and the United States provide a market of 150,000,000 people to whom the offer of Canadian opportunity can be made. But the process will be very slow if an intensive selling of that opportunity is not carried on in every sound and reasonable way over the next five years. Mr. Ross suggested that a sum of \$5,000,000 should be placed in the Federal budget every year for the next three years to be spent specifically in telling the people of Great Britain and the United States about Canada during the next three years, her golden opportunity and certain future. That, he said, would be good salesmanship. Possibly mention of a sum like \$5,000,000 may seem ridiculous to many people. But when one considers the immense sums appropriated by commercial concerns for publicity purposes that have only a small fraction of the wares Canada has to offer, the suggestion assumes another aspect. Judiciously planned and expended, advertising is really an investment with much greater certainty of profit than can be assumed in the case of less extensive and varied marketable offerings.

Would Produce Sugar for Prairies

Alberta Sees Possibilities of Supplying Sufficient Sugar for Western Market

The possibility of Alberta becoming the domestic producer of sugar for the entire Prairie Provinces was suggested by T. G. Wood, district manager of the Canadian Sugar Factories at Raymond, who stated there was room for at least eight or ten more factories with a capacity of 1,000 tons of beets per day. Producing sugar for the entire population would mean the utilization of about 100,000 acres of irrigated land which would employ 500 men.

Tomato is a Fruit

That old question regarding the status of the tomato, which has been stirring up strife for years, has finally been settled by Order-in-Council of the Dominion Government. Henceforth the tomato is to be termed a fruit, in so far as the Dominion Department of Agriculture is concerned, according to a statement by Fruit Commissioner McIntosh at the Ontario Fruit Growers' Convention in Hamilton.

Liza was on the witness stand. "Are you positive," inquired the prosecutor, "that you know where your husband was on the night this crime was committed?" "If I didn't," replied the witness firmly, "den Ah busted a good rollin' pin over an innocent man's head, den's all!"

Opera singers are entitled to a 10 per cent. increase in salary when the performances are broadcast by radio, a Berlin court has decreed.

W. N. C. 1672

Achieve Production Of Synthetic Gasoline

Method Has Been Discovered by French Engineers Is Reported

Synthetic production of gasoline on a commercial basis at two thirds of the present cost is announced as achieved by two French engineers, Albert Prudhomme and Eugen Roudry. Development of their method was supervised by an engineer for the mines commission of the chamber of deputies and is declared to be of national interest.

A small plant is said to be actually extracting five gallons of gasoline, four of fuel oil, and valuable sulphur from a ton of lignite. There is estimated to be enough lignite available to supply France with gasoline by this method for 150 years.

The process consists in distilling lignite gases from which the various products are extracted by chemical processes already known. These processes, however, are modified by the introduction of metal particles which facilitate the chemical action to a degree hitherto unattainable.

Winnipeg Newspaper Union

An Attractive Frock for Many Occasions

This frock shows to special advantage the charm of combining two materials—so smart this season. The skirt has two godets in front and two at the back and is gathered to a bodice having a beaming round collar and long tight fitting sleeves finished with trim cuffs. A narrow belt of the contrasting material completes this chic frock. No. 1502 is in sizes 8, 10, 12 and 14 years. Size 10 years requires 2 1/2 yards 36 inch material for the dress, and 7/8 yard 36 inch contrasting for godets, collar, cuffs and belt. Price 20 cents the pattern.

Home sewing brings attire clothes within the reach of all, and to follow the mode is delightful when it can be done so easily and economically, by following the styles pictured in our new Fashion Book. A chart accompanying each pattern shows the material as it appears when cut out. Every detail is explained so that the inexperienced sewer can make without difficulty an attractive dress. Price of the book 10 cents 60 copy.

Many Homestead Entries

Yet further increases in homestead filings in Western Canada are already recorded for 1927. The number of homesteads filed in the month of January was 343, as compared with 276 in January, 1926, and increase of 67. Filings in Manitoba were 26, against 27; in Saskatchewan 136, as against 115; in Alberta 115, against 109, and in British Columbia 6 against 1.

Combating the Weed Pest

Aggressive Campaign by Farmers Would Soon Bring About Marked Change

The world's greatest Teacher, in making applications of truth, referred to the flowers of the field, "how they grow; they tell not, neither do they spin." In Western Canada, its beautiful native flowers are being rapidly eliminated by cultivated fields, and much of the virgin beauty of the prairies is gone forever. In their place we have waving fields of grain, which, while not appealing so much to the aesthetic eye, does supply his daily wants.

In these vast fields, which are so much admired, there is a serious menace showing itself more and more each year. This is the weed pest. The farmer wants to get busy. Consider how the weeds grow. If we may judge by their prolificacy it certainly looks as though there was considerable toil ahead for the farmer if he hopes to combat the weed pest. Useful plants deplete the soil fast enough without having it done by weeds, which are almost useless to both man and beast, at least so far as is known at present.

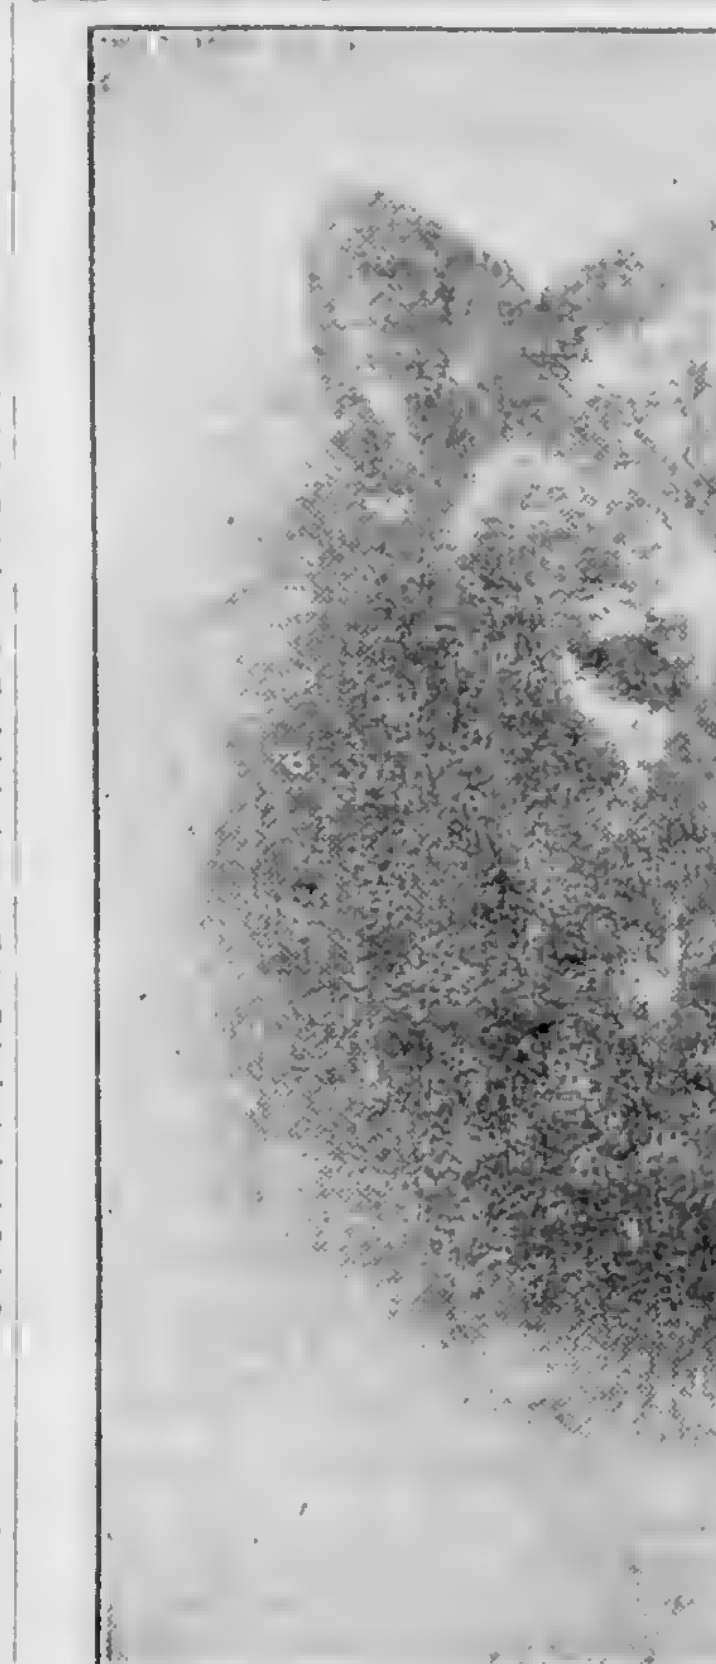

What a shortsighted policy it looks to see so much of our grain fields taken up by useless weeds of various kinds. We believe present conditions can be vastly improved and the matter is entirely up to the farmers themselves. If they would band themselves together and formulate a five aggressive campaign, a year or so would see a marvelous change. When we realize how much good grain is crowded out by weed plants, the loss in yield, paying for (wheat and threshing, and carrying to market that which in the end the farmers are docked for, surely good interest would be earned for the effort put forth. Better to get busy at once for each year you toil not in this matter, the stronger and more firmly entrenched becomes the enemy. Economists and others may tell our farmers about these things, but the farmers are the only ones who are able to apply the remedy.

Chief Scout Celebrates Birthday

Sir Robert Baden-Powell, founder of the Boy Scout and Girl Guide movements, celebrated his 70th birthday recently which was also the birthday of his wife. Both are at present in South Africa. There are now 2,600,000 members of the organization which Sir Robert founded in 1908 "to promote good citizenship in rising generations."

Gambling Profitable for France

However costly it may have been to gamblers themselves, games of chance were profitable for the French Government during 1926. Receipts from the taxation of the casinos were 252,600,000 francs, or about \$10,500,000. This represents a huge increase over the previous year.

Veteran of Canadian Service

Montie, the fond dog of the Chateau Frontenac huskie team, has seen five years active service with the famous Royal Canadian Mounted Police, in the far north. Four years ago he was brought from La Pas, Manitoba, as lead dog for the team in Quebec.

Now in his old age he has every care and attention, eleven years of faithful service should have some recompense. This dog is almost human in every way, and particularly where age is concerned; this he resents, and often asks in an insistent manner to be put into the team. Beauvals, driver of the team, cannot resist his dumb appeal not to be counted too old to carry on the work. The faithful brute's entire life has been one of service, and he still longs to be counted in the running. He may rest one day or two but he evidently has made up his mind to do more; not while he lives will he allow the other lead dogs to take his place entirely. He has not been in the service of the Dominion of Canada without spirit and grit behind him, and these still carry him far to be of service to Winter Sports enthusiasts in old Quebec.

Big Trade With Russia

Soviet Republic Places Heavy Orders For Canadian Agricultural Machinery

Orders for agricultural implements placed in Canada by the Union of Soviet Socialist Republics this year to date are already twice as large as those placed with Canadian firms for the whole of 1926. According to figures supplied by the U.S.S.R. Trade Delegation in Canada, enough mowers have been bought here in the first six weeks of the present year to cut 24,000 acres per day for a twelve-day haying season; enough binders were bought to cut 600,000,000 sheaves of grain from 42,769 acres—these binders, if stretched out with a yard space intervals would cover 6 1/2 miles, while the mowers, placed abreast, would span 11 miles. Some 9,900 horses will be required to draw these machines. Binder twine bought by the delegation, in the period mentioned, runs to 5,000,000 lbs. or just half of Canada's total exports to all countries in 1926. Incidentally, the delegation points out that while, before the revolution only 500 tractors were in use in what was then known as the Russian Empire, some 20,000 are now being operated in the same territory.

Western Hay for China

Two Hundred Tons of Alfalfa Shipped to the Orient

Two hundred tons of alfalfa hay were shipped recently from the Lethbridge, Alberta district for China—the first shipment of Canadian hay to that country so far as is known. The hay was moved to the Pacific coast in a special C.P.R. through freight of 20 cars and was loaded at Vancouver on the Blue Line Tyndareus for Hong Kong.

The order for the large shipment was received by W. C. MacKenzie, manager of the Southern Alberta Co-operative Association, from the British government agricultural department, London. It is thought that possibly the hurried order was brought about by the war in China and the concentration of British emergency troops in the disturbed area.

Only No. 1 well baled hay was sent in the hope that the shipment will be the opening of a large trade with the Far East.

Punishing Profiters

Profiteering grocers are being punished in a new way by the Paris police, who forbid them to make their usual sidewalk display of goods, for varying periods. When returning offenders to withdraw their wares from the sidewalk the police tell them: "Your customers will know why you have no display, and they will know they will do well not to patronize you."

A clock keeps right on working when it goes on a strike; that's where it gets the bulge on a man.

Government Action Is Urged To Protect the High Standard Of Canadian Seed Wheat

Scotchman Built First Reaper

Presbyterian Minister Worked Out Idea Hundred Years Ago

Celebration of the centenary of the creation of the first practical reaping machine is coming soon and its date may surprise those who view modern farm machinery as of this inventive age. Of course, it was really so late as 1877 that the reaper began his grand career, though Cyrus McCormick's first appeared in 1831. One John Connon had once produced a mechanical one. The real start of the wonder machine that was the father of all present power reapers was in the brain of Rev. Patrick Bell, a Presbyterian minister of Carnyllie, Fifeshire, Scotland. He built the first efficient reaping machine in his spare time and his old hours were few. Belated honors will be done to his invention.

Rev. Patrick Bell was a farmer's son, and though he early headed for the ministry, he was never so absorbed in theology that he did not recognize the need for a machine that would take off the farmers' shoulders the labor of harvesting grain by processes dating back to prehistoric times. As a youth he experimented, and after he had passed into the ministry and was performing his duties to his flock on the Sabbath, week days he continued to study the agricultural problem, resulting in the successful building of a reaper in 1826. It operated a series of scissors fashioned on the "clack" heard.

However, McCormick's superior mechanism and the superior driving power put behind the United States invention prevented the Scotchman from profiting as fully as he should but neither Cyrus McCormick nor a whole host of his followers in the inventive industry, find the economics of the coming summer will be held back in his own village and in St. Giles' Cathedral, Edinburgh, where thanks will be given for the inspiration that advanced so greatly the future of an agricultural population.

Capital for Northern Development

Proposed Paper Mill on Nelson River Would Use Hudson Bay Route

Application for a timber tract on 11,500-acre lands in the Nelson basin, which has been made to the federal government, has been followed by a report of a paper mill at White Mud Bay, on the Nelson River, and the start of the mill's new pulp plant to Europe by the Hudson Bay route. The International Paper company, according to reliable information received in Winnipeg, is behind the development project. The company's completion of the Hudson Bay route and this year is understood to have been one of the important events in dealing to go about a new pulp plant.

Favorable to the plan, the fact that the mill is to be built on a site of a northern paper mill, and that it is a well-located, and a paper mill at White Mud Bay has long been considered a necessity to avoid the undesirable and expensive transportation of the development of the power site, the power at the White Mud site is estimated at 100,000—Machinists Free Press.

Diversified Farming

Alberta Farmers Getting Away From Straight Wheat Growing

Alberta, formerly almost 100 per cent. straight wheat farming country, has changed radically in this respect in the last fifteen years, and although the wheat yield in the province in 1926 was 112,000,000 bushels, this represented only 45 per cent. of the value of the agricultural products, which totalled \$201,000,000—the greatest in the history of Alberta. Fodder crops are climbing rapidly in the percentage table of values, being now 21 per cent., while dairy products are now 14 per cent.

The energies of 8,000 to 10,000 farmers and provide farm labor for approximately 6,000 to 8,000 men. The one factory in operation has already absorbed about 500 European laborers as land workers on the crop.

Fish dried by electrical hydrating plants, it is said, may be kept for years.

It is easier to dodge responsibility than it is to dodge the result.

"Before I met you I thought only of making money." "She: "Well, don't stop now. Father hasn't as much money as you thought."

Action to Amend the Dominion Seeds Act, to protect the grade of Canadian wheat, has been taken by the agricultural committee of the House of Commons, when it recommended that the act be amended to give the Minister of Agriculture the right to refuse a license for the sale of new varieties of wheat for seed purposes until the quality of the new variety has been passed on.

A resolution passed by the committee recommends that the Minister be given the right to refer applications for distribution of new varieties of seed to a board, consisting of the seed commissioner, the Dominion specialist, a representative from the Canadian Seed Growers' Association, a representative of the provincial seed board of the province in which the application originated, and a representative of the wheat pool.

It was also urged that the Minister have power to revoke any license already granted for a new variety of wheat, upon recommendation of the board mentioned.

Hon. W. R. Meighen, who introduced the resolution and a second amendment that the bill should be passed without delay.

E. J. Harland, Bow River, thought that agriculturists were in danger of being misled by the use of the word "hybrid" in connection with seed. A person buying seed who should be protected, but it should not be made almost impossible for a farmer to experiment with the growth of new varieties of wheat.

Hon. S. E. Fournier, Vancouver, B.C., said that the high standard of Canadian wheat should be maintained by the strictest means. Every freedom should be given a farmer to try to develop new varieties, but full scope should not be allowed the "quack" growers to dump their products throughout the country without first proving the value of the variety.

Improvement in the Horse Industry

Increasing Demand is Noted for Well Bred Horses

Despite the growth and development of the Dominion Department of Agriculture is able to report from year to year continued improvement in the horse industry and increasing demand, it is added particularly in the western provinces. Horses are used for the most part in order to meet the needs of the farms, says the Dominion Department of Agriculture in its report for the year ending March 31 last. They are used for the most part in order to meet the needs of the farms, says the Dominion Department of Agriculture in its report for the year ending March 31 last. They are used for the most part in order to meet the needs of the farms, says the Dominion Department of Agriculture in its report for the year ending March 31 last.

Sugar Beet Outlook

Good Returns are Offered to Beet Growers in Southern Alberta

The Revenue department has very encouragingly reported that the sugar beet crop in the province of Alberta is a record. The crop is estimated to be a record of 12,000,000 bushels, which is a 12 per cent. increase over the crop of 1925. The price of sugar is \$1.10 a bushel, which is a 10 per cent. increase over the price of 1925. The price of sugar is \$1.10 a bushel, which is a 10 per cent. increase over the price of 1925.

Nearly Everyone Drives

There is an automobile for every 6.5 persons in Alberta now, according to figures supplied by the Provincial Secretary. In the year 1926 there were 2,411 motor vehicles, as compared with 2,157 in 1925, and 2,000 in 1924. This is an increase of 36 per cent. over 1925, and 17 per cent. over 1924.

Alberta Coal Output

Figures of the Alberta Mines Branch show a total coal output in all fields of the province of 6,508,903 tons in 1926, as compared with 5,882,391 in 1925—the third largest in the history of the province, being exceeded in 1920 and 1923.

Saar Valley Commission Report Is Accepted After Much Discussion

Geneva. Following the meeting of the League of Nations Council at which the report of the commission governing the Saar Valley was accepted, a private sitting was held at which Major George W. Stephens, Montreal, was re-elected temporary chairman and the other members re-elected for another year. It is stated that Major Stephens will serve only until another Canadian suitable for the position can be secured.

Sir Austen Chamberlain, British Foreign Minister, contributed largely to the satisfactory solution of the difficulties obstructing passage of the commission's report which provides for the reduction of the troops in the Saar to 800, this to be a railway defence force of international character. In place of the French troops now there. In a warm and earnest speech, he showed Foreign Minister Stresemann of Germany, the difficulty of establishing an international force such as Herr Stresemann proposed and was finally successful in having the report adopted unanimously.

Dominions Agree On New Pacific Cable

Canada's Representative on Board Will Likely Be Chairman

London. The Daily Express states that an agreement has been reached between the Governments of Britain, Canada, Australia and New Zealand, on the chairmanship of the Pacific Cable Board, on which these governments are represented. The chairmanship will be offered to Sir Campbell Stuart, Canada's representative on the board as soon as the new bill now before the House of Commons is passed. The Express says:

Sir Campbell Stuart is a native of Montreal and director of the Times Publishing Company.

Blizzard Hits Colorado

Denver, Col. A blizzard in South-east Colorado delayed trains, blocked highways and blasted hopes of Silverton and Durango, San Juan Valley mining communities, in re-establish transportation lines severed a month ago by snow slides. Both towns depended on mules for medical supplies until last week when an airplane succeeded in reaching them.

Makes First Speech

Quebec—Hermidas Plon, Liberal M.P. for Val-de-Richelieu, has made his first speech in the legislature in the twenty-seven years he has represented Val-de-Richelieu in the House. He advocated more precautionary tests of cattle imported from the province.

Influenza in Russia

Geneva. — The influenza epidemic now has attacked Russia, says a League of Nations health bulletin. The disease is continuing in Ireland and Scotland, but decreasing elsewhere in Europe.

Claims Railway Rates In West Are Reasonable For Service Rendered

Ottawa. That the great development in the prairie provinces was in itself strong and abundant proof that the transportation rates today are fair and reasonable for the service rendered, was the argument advanced by Frank J. Watson, freight traffic specialist at the general freight rates investigation before the Board of Railway Commissioners.

Mr. Watson took up the rate schedule as it affects livestock, and declared the railways have a deep interest in the development of the livestock industry, particularly in the West, but the rates today are lower, he claimed, than might be considered reasonable, having regard to all existing conditions, and they could not in any fairness be reduced further at the present time.

Proceeding to discuss the general application of the C.N.R. freight

Interim Pool Payment

\$27,000,000 Being Distributed to Farmers in Three Prairie Provinces

Regina, Sask.—The Canadian Co-operative Wheat Producers, Limited, central selling agency for the three prairie wheat pools, announces that the first interim payment for the 1926-27 crop is being mailed from the offices of the Manitoba, Saskatchewan and Alberta pools. The amount of the payment is officially stated to be 15c per bushel for spring wheat and spring wheat mixtures, 20c per bushel for durum wheat and durum wheat mixtures, 8c per bushel on all grades of barley, 12c per bushel on all grades of oats. A total of \$27,000,000 is thus distributed to prairie farmers in the three provinces, according to Mr. McPhail.

Saskatchewan's share of the \$27,000,000 being distributed as a result of the interim wheat pool payment on the 1926-27 crop amounts to between \$17,500,000 and \$18,000,000 according to an official statement issued by the Saskatchewan Co-operative Wheat Producers, Limited.

Officials of the pool call attention to the fact that this large sum of money, scattered widespread over Saskatchewan just prior to seeding, represents one of the tangible benefits of the pool system of marketing, which was absolutely unknown prior to the organization of the pools in 1923 and 1924. The beneficial effect of these payments is not only recognized and greatly appreciated by pool members, but it is recognized by bankers and statesmen alike.

Suggests Tablets To Commemorate Jubilee

Would Carry Message of Confederation Throughout Canada Says Ontario M.P.

Ottawa.—The message of confederation could be brought home to every elector in the Dominion next by the placing of a bronze tablet in every riding to commemorate the greatest event in the history of the Dominion. Dr. T. E. Kaiser, Conservative member for the riding of Ontario, believes.

Dr. Kaiser is passing his suggestion along to the committee in charge of the jubilee celebration. He has artists working on a plaque which will be presented to the committee.

A bronze table could be made from the plaque. On it there would be Queen Victoria, Sir John A. Macdonald, Sir Wilfrid Laurier and every prime minister of Canada.

In the centre would appear the face of the face of the statue member of the riding in 1927. The tablet would be appropriately worded and be hung in every county council or municipal chamber in every one of the 245 ridings in the Dominion.

Withdrawn From Dog Derby

Prince Albert, Emil St. Godard, The Pas, Man., officially withdrew from the 160 mile dog derby, when his dogs were in such bad shape that they were unable to walk. Asked why he had not decided to light it out with Olensky, Emil remarked: "My dogs mean more to me than the glory of winning the race."

Urges New Treaty Practice

British Foreign Secretary Asks Negotiation Between Heads of States

Geneva. An echo of the last Imperial Conference was sounded in the League of Nations Council when Sir Austen Chamberlain, British foreign secretary, asked the League to abolish the practice of negotiating treaties as between states and substitute that of treaties between heads of states.

He explained that his statement was made at the request of the British and Dominion governments. It did not mean that the Dominions would lose their prerogative of approving or rejecting treaties but that acceptance of treaties by Great Britain and the Dominions would be facilitated.

Ottawa. The statement made by Sir Austen Chamberlain in the Council of the League of Nations as to the form of signature which it was hoped would be adopted for the British Empire in signing League documents, is in line with the decision arrived at during the Imperial conference. The Canadian Government also received detailed information as to Mr. Chamberlain's statement.

Britain Cuts Navy Estimate

Expenditure Will Be \$500,000 Less Than Last Year

London. Great Britain's navy estimates for 1927, call for an expenditure of £58,000,000. This is a decrease of £100,000 compared with last year. The estimates provide for a total personnel of 102,275, a decrease of 400.

In a statement accompanying the estimates W. C. Bridgeman, first lord of the admiralty, points out that the provision for new construction was increased from £9,082,000 to £9,582,446, and for the fleet air division from £681,000 to £882,000. But economies were effected in other directions allowing a net reduction in the estimates. During 1927, two new battleships replacing four scrapped in accordance with the Washington agreement will go in the Atlantic fleet. They are the Nelson and Rodney.

The 1927 program includes provision for starting one class A cruiser, and two class B cruisers, one battle cruiser, eight destroyers, six submarines and two mine sweepers.

London Worker Has Terrifying Experience

Was Swept Into Sewer by Rush of Water and Carried Many Blocks

London.—A workman engaged in sewer work in Chancery Lane had a terrifying experience when a sudden rush of water swept him into the sewer. From Chancery Lane he was whirled at great speed fifty feet down beneath Fleet Street and then into Ludgate Circus, where the sewer enters the subterranean river Fleet now in full flood.

He was passed along several other streets and finally was shot out into the river Thames, beneath Blackfriars Bridge, where he was rescued by river police. Beyond severe exhaustion he was not seriously hurt.

Want Higher Wages

Winnipeg. Employees of the Canadian National Express Company representing 2,500 from coast to coast, have served notice of a demand for higher wages on officials of the company. The exact amount of the general increase cannot be stated, although it is thought to be an average of approximately 20 per cent.

Would Amend British North America Act

J. S. Woodsworth Suggests Committee Be Appointed to Change Constitution

Ottawa. A special committee "to consider what amendments might be made to the British North America Act which, while conserving the principles of confederation would enable us more adequately to cope with the complicated problems which now confront Canada," was proposed in the House of Commons by J. S. Woodsworth, Labor, Winnipeg North Centre.

Mr. Woodsworth gave as reasons for his proposal:

A. The constitutional developments of the last 50 years.

B. The dissatisfaction of certain provinces.

C. The changed conditions in industries, commerce and finance not contemplated at the time of Confederation.

D. The action of the Senate in preventing the enactment of popular legislation.

In proposing his resolution Mr. Woodsworth declared Canada had no way of changing its own constitution, and in this regard it was inferior to South Africa, Australia and the Motherland. He spoke of a "very widespread feeling" in the West that there would be an inevitable break in confederation with perhaps cooperation with the other parts of Canada on some other basis.

Engine Trouble Ends Trans-Atlantic Flight

Oil Pipe in Motor Blocked Says Message From Uruguayan Flier

Madrid. Paralyzation of an oil pipe in the motor of his plane brought the trans-Atlantic expedition of Major Tadeo Lario Borges, Uruguayan flier, to an abrupt end while he was flying from Casa Blanca, Morocco, to Cape Jidd. He made this known in a letter message received by the Uruguayan minister through the high commissioner at Cape Jidd. The message said the failure of the oil pipe to function made it necessary to stop and that the plane was destroyed when it alighted.

Major Tadeo Lario Borges is in the hands of Moroccan officials who captured him and his three flying companions after the plane was wrecked. He is believed to be held for ransom.

Quebec Women Denied Franchise

Bill to Give Women Vote in Provincial Election Is Defeated

Quebec. Women's suffrage failed badly in the Quebec Legislative Assembly today, a bill to give them the vote in provincial elections being defeated on second reading, 51 to 13. The speeches were very brief, covering on either side some of the general reasons advanced in favor of women's votes and against. Victor Marchand, Liberal of Quebec, carried, sponsored the bill. Both Taschereau and Mr. Sturges voted against.

Hon. Honore Mercier, Hon. Alphonse David, Hon. L. Lapierre and Hon. J. N. Bellen voted for the bill.

Arms Parley This Fall

Geneva. The League of Nations council adopted a resolution to the effect that the international conference for supervision of private manufacture of arms should be held this fall.

Public Building Estimates Totalling Over 7 Million Pass House Of Commons

Think Britain Favors War Craft Limitations

Officials at Washington Believe in Ultimate Success of Plan

Washington. London and Tokyo news agencies, clearly indicating that Great Britain and Japan will accept the Ludlow proposal for a conference with the United States at Geneva, this summer on armaments was confirmed by officials here to mean that such a project ultimately will be brought about.

While there has not been much doubt as to the Japanese attitude toward such an arrangement British sentiment in the past generally has been against any limitation of armaments as long as her continental neighbors refused to limit submarine construction and officials have looked to Great Britain to move the greatest obstacle in the way of a three-power pact.

Public opinion throughout Great Britain as interpreted by that country's officials was described as demanding British acceptance of any plan for naval limitation.

Geneva dispatches carried the additional information that Great Britain would insist on linking the three-power pact with France and Italy not exceeding certain tonnage in cruisers, submarines and torpedo boats.

Would Reform Senate

Newly Appointed Senators Are Favorable to Proposed Changes

Ottawa. Hon. Rued Langford, Government leader in the Senate, in answer to questions by Senators Meads and Tannock, on pledges given on Senate reform by recently appointed senators, made the following statement:

"The policy of the Liberal Party on the question of Senate reform was proclaimed officially at the two last general elections by the leader of the Liberal Party, the present Prime Minister."

"The question generally asked, members recently appointed to this chamber has borne upon their views concerning that question of Senate reform."

"As members of the Liberal Party and adherents to its policy, they have not hesitated to declare they were favorable to a reform of the Senate which would bring this chamber nearer the modern and democratic conception of a second chamber, with the clear understanding that such changes would be introduced and carried on in conformity with the requirements of the constitution."

Stays at Saar Post

Paris. It is reported here that Major George Washington Stevens, Montreal, has consented to withdraw his resignation as president of the governing commission of the Saar Valley until another Canadian with knowledge of French and German can be found to replace him.

Recommend Extensive Changes In Service To Put Curb On Smuggling

Ottawa. Extensive changes in the preventive service against smuggling, including the increase in the personnel from 92 to 129 on land and the addition of fast patrol motor boats, are recommended in the report of the advisory and consultative committee on the excise preventive service reorganization, tabled in the House of Commons by Hon. W. D. Etherington, minister of customs and excise.

"The preventive service should be strengthened greatly if anything like reasonably satisfactory control of smuggling into this country is to be expected," stated the committee. The report shows that the 15 boats with crews of 150 at present owned by the service, have speeds varying from six to fifteen knots per hour. These vessels are "hopelessly outclassed" in speed and size by the vessels owned by liquor smugglers who make high profits.

It is proposed that two vessels and two fast launches should be provided as the minimum equipment as soon as possible. They should be 125 feet long with a minimum speed of

Ottawa. The House of Commons approved estimates for public buildings in Saskatchewan totalling \$205,350. The vote includes \$17,000 for improvement to Dominion public buildings, \$1,200 for repairs and improvements to the Indian Head forest nursery station, \$3,500 for improvements to the Moose Jaw public building, \$10,500 for alterations to the public building at Prince Albert, \$150,000 for an additional site for the Regina Post Office, \$1,500 for repairs to the Saskatoon Post Office, \$12,000 for the Post Office at Tisdale, and \$3,750 for repairs to the Saskatchewan forest nursery station.

When the item for the purchase of additional property for the Post Office at Regina was under consideration, A. M. Young (Liberal, Saskatoon), moved the continuation of a new Post Office at Saskatoon. He did not, he pointed out, oppose the item in respect to Regina.

Hon. C. A. Fleming, Minister of Railways, declared the great difficulty with regard to the Regina Post Office was lack of ground near space and the creation of a building elsewhere would not solve the Post Office difficulty. Officers of the Post Office could see no solution to the problem unless the present floor space was extended. Once the site was obtained, and this was going to be done through expropriation proceedings, it would be necessary to come back to Parliament for the money to erect the addition to the present Post Office.

Estimates of the public works department passed totaled \$7,717,062 of this total \$7,412,252 was for public buildings in Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. B.C. repairs, furniture, heating, etc., of public buildings amounted for \$3,339,500 of the total just before adjournment a vote of \$296,240 for harbors and rivers of Nova Scotia was added, making up the grand total.

The votes for public buildings by provinces passed were: Quebec, \$621,927; Ontario, \$612,613; Manitoba, \$104,000; Saskatchewan, \$205,350; Alberta, \$32,000; British Columbia, \$213,262; and "General" \$270,000.

Will Remain Neutral

Britain Not Involved in Capture of Soviet Agents by Chinese

London. The British Government has not been asked to intervene on behalf of Miss Broadbin, arrested by Northern Chinese forces near Shanghai, it was stated at the foreign office. Officials said Great Britain was not involved in the incident, and it was doubtful whether the British policy of neutrality, as between the Northern and Southern armies would permit of intervention. It is believed here that the lives of the three Soviet courier arrested near Miss Broadbin in the capture of the steamship Catalina are not endangered.

The So far Government has sent two notes to Peking urging that the vessel be surrendered and that Miss Broadbin and the three other Russians arrested with her be released immediately.

First of 3,000 Families for Canada in 1927

Mr. J. Macdonald, Canadian Government Agent, Glasgow, (left), taking charge of the first family of the year to leave Scotland under the 3,000 Families Settlement Scheme. The family comprises Mr. and Mrs. Alex. L. Thomson, and their four children from New Deer, Aberdeenshire, who proceeded to Canada, on board the Canadian Pacific liner "Montclair," to take up farming in British Columbia. They travelled all the way for the inclusive charge of £145, whereas, the full fare for the family is £142.

A Tribute to Britain

Bishop Manning of New York Praises Qualities Which Characterize Empire

That was a noble and splendid tribute paid by Bishop Manning of New York to the British people and to the King and Queen on the occasion of the presentation of a silver alms dish, the gift of King George to the Cathedral of St. John the Divine, now in course of erection. Sir Esmé Howard, the British Ambassador, declared it to be the King's hope that the dish would be accepted and preserved as a tangible link in the chain of friendship between the United States and the British Commonwealth. Accepting the gift, Bishop Manning declared that the United States must stand with Great Britain and the other nations of the world and bear its part share of world responsibility. Speaking of the gift itself, he closed with these eloquent and moving words:

"In essence, let me say that with nations, as with individuals, it is character that is the supreme factor. It is for their spirit and character as a people that we honor our British friends. We honor them for their love of liberty, for their high sense of responsibility, for their loyalty to the principles of justice, of righteousness and of religion. And on this occasion I am permitted to say that we honor them for the noble qualities that nobly distinguish the King and Queen, the King George and the Queen Mary, in whom they have found their true way which has won the respect and admiration of the world. Their great influence has been and will be for the betterment of human life, for the enrichment and permanence of our race and the future, for duty and for the highest and noblest of all—peace and religion."

Chicago Professor is Worried

Afraid U.S. Will be Over-Populated in Year 2000

The Malthusian view which war and chaos has created in varying degrees at the University of Chicago.

Prof. H. H. Barrow, in an address to the Hamilton Club, says it is out that with the modern success and material progress, the world is now a divided one. The present basis of population there will be 25,000,000 people in the United States in the year 2000. That is only 75 years away. What to do with them is the problem the anxious professor poses.

The whole country will be crowded out, says Barrow. The world will be a divided one. The present basis of population there will be 25,000,000 people in the United States in the year 2000. That is only 75 years away. What to do with them is the problem the anxious professor poses.

Indians Still Observe Ancient Burial Rites

Alert Bay Settlement Undisturbed by Advance of Civilization

While the Indian aborigines of British Columbia have, in many instances, adopted the manners and customs of the white men, their burial ceremonies in some of the reservations still retain many of the features of other days.

Alert Bay, one of the few coast Indian settlements that have been little disturbed by the advance of civilization, witnessed recently the funeral of a prominent Indian woman which bore the trappings of savage pomp and splendor.

The funeral was held to the accompaniment of the means of paid mourners and the grave covered by a canopy of white cotton cloth. Below this was a large plate of glass set on a frame which covered a beautiful display of flowers. These were spread over an ancient ceremonial robe, embroidered with pearl buttons and elk teeth. All the most prized possessions were on the ground in the vicinity of the grave. Clothes and boots were ranged in orderly fashion near the head of the grave, while a trunk on which was set a small phonograph, covered by a scalloped cloth, was placed at the foot of it. On dishes placed nearby was food for the use of the departed spirit in the happy hunting ground.

The Alert Bay Indians have their Indian house and nearly all of them have embraced a nominal Christianity, yet in their burial customs they appear to have clung to their ancient pagan ritual.

Woman Holds Queer Title

Is Named as Chiroprapist to King George V.

Of all the queer titles with which this cosmopolitan capital abounds, is one lately bestowed on a young London woman. Her official title is "chiroprapist to King George V."

The list of tradesmen who hold warrants of appointment to King George, Queen Mary and the Prince of Wales is published at the beginning of each year. This list shows that some curious professions receive royal patronage.

Holders of warrants to the King include naturalists, firm of philatelists, a taxidermist, a chiroprapist (Miss Kelly), a monumental sculptor, several makers of kites and tarts, and purveyors of many kinds.

Tradesmen who hold warrants of appointment to Queen Mary include manufacturers of books and eyes, a chiroprapist, invalid furniture makers and pin manufacturers.

Holders of the Royal Warrant are allowed to display the Royal Coat of Arms in their business premises and stationery.

What a "Milliard" Is

Few People Can Realize What a Thousand Millions Means

The word "million" has been familiar since the war, and its use has been made familiar by reason of fantastic inflation and of national debt. The Manchester Guardian asks: How many people have imagination enough to realize what it really means? One of the simplest and most impressive illustrations of what it means is that only one milliard minutes have passed since the birth of Christ.

Withdraw French Troops

Another measure calculated further to harmonize Franco-German relations was announced, with a recommendation by Saar Valley governing commission that the French force of occupation be evacuated from that territory and replaced by an international railway defense corps. The recommendation is signed by George Washington Stephens, of Montreal, whose resignation from the presidency of the governing commission was announced recently.

Quantities of Sugar and Salt Used

In the preserving of Canadian vegetables for commercial sale, nearly 100 tons of salt are used each year, and in fruit preserving nearly 3,000 tons of sugar. This is in addition to the vast quantities used up in the old-fashioned way on the kitchen range, says the Natural Intelligence Service of the Department of the Interior.

Crime in United States

Crime costs the United States at least sixteen billion dollars a year it is estimated by Mark O. Prentiss in the Manufacturers Record. The estimate includes criminal frauds, loss of property, cost of law enforcement and economic waste without attempt at graft and gambling figures.

Consider the fish. He never gets hooked as long as he keeps his mouth shut.

Improvement In Sheep Breeding

Pure Bred Ram Premium Policy Is Proving Popular

Of the several policies brought into effect in recent years by the Live Stock Branch at Ottawa one that is proving of the greatest interest and value is that known as the pure bred ram premium policy. In the year ending March 31, 1926, a total of 1908 applications for first premiums and 1892 applications for second premiums were approved. As a result of the policy since 1918 there has been a vast increase in the volume of well-bred lambs marketed in Canada and shipped abroad.

Another way in which increase of interest and progress of improvement in the sheep industry is marked is in the organization of pure-bred ram clubs. Farmers in a community agree to purchase twenty-five or more pure-bred rams of one breed and when sufficient orders have been obtained the club appoints a purchasing delegate to make the selections, do the buying, and supervise the distribution of the rams to members. The success of this part of the policy is especially indicated by the yearly increase of clubs and by the satisfaction shown by the applications for replacements by clubs that have been in existence for years. Forty-one new clubs were organized and 1626 rams placed in the year here referred to. Lambs marketed by the clubs have shown superior quality and commanded the best prices.

Farmers in the clubs, points out the Dominion Live Stock Commissioner, continue to keep a number of the ewe lambs for breeding purposes, with the result that the ewe flocks are showing a decided improvement in quality of fleece. In fact, the commissioner adds, it will be only a matter of time until scrub ewes will be entirely replaced by ewes that are the progeny of pure-bred rams.

Canada's Greatest Dairy Concern

Rebela has been elected headquarters of what is said to be the greatest dairy business in Canada when the Saskatchewan Cooperative Creameries and the Caulder Creameries amalgamate, March 1st. Fifty-five plants are involved in the merger and the fixed assets of the two concerns total more than \$2,000,000.

Ostrich feathers are plucked every seven months and as the birds often live to the age of 50 years, ostrich farms are profitable.

Vastness of Agricultural Publication

Every Phase of Agricultural Interest Is Covered by Government Bulletins

Haphazard farming has passed out and intelligent thought and study has taken its place. Possibly there is no better indication of this fact than the ever increasing demand for agricultural publications. A proof of this is found in the report of the Minister of Agriculture for the year ending March 31st last. It is there stated that in the one year the increase in demand over the previous year was 25 per cent, and that in all the vast amount of nearly three and a half million copies of bulletins, pamphlets and reports had been distributed. In addition to the printed publications last year, 785,591 multigraphed periodicals were circulated compared with 700,509 in 1924-25. In light of these facts it is easy to understand that, as the Minister states, the Dominion Department of Agriculture is by far the largest publisher in the government service.

Each year the department issues scores of publications that, returns show, are eagerly sought after by farmers, gardeners, specialists and backyard cultivators. Every phase of agricultural interest is dealt with in the publications, of which there are over 500 catalogued, and that can largely be had free of cost. Lists can always be obtained by application to the Publications Branch.

Chinook Now Dead Language

Was Once Spoken by Over Hundred Thousand Persons

Chinook, which has served as a sort of lingua franca between the Indian tribes and white traders of the Pacific Northwest and which has left many picturesque place names in the Vancouver territory, is a dead language now, according to Edward Harper Thomas, of Seattle, who is an authority on Indian languages and dialects.

At one time in the history of this continent Chinook was spoken by more than one hundred thousand persons in their every-day relations and intercourse.

The word "Chinook" is Chinuk in origin, taken from "Chinuk" meaning little child.

Every time a girl gets interested in a novel the heroine resembles her of her life.

Albania is the only country in Europe without railways.

Women Amazons of England's Factories

Those Employed in Chemical Works Show Surprising Strength

Some surprising details of the comparative physical strength of women in factories and the modern college girl were given by Professor P. Cathart, Gardner Professor of Chemical Physiology at Glasgow University, in a lecture at the Royal Institution of Great Britain, Piccadilly, W.

In investigations made by the Medical Research Council, at the request of the Home Secretary, to determine the load that can be comfortably carried by an average woman, it was found that the heaviest work done by women was at a chemical works at Glasgow and a brick-works in the Midlands. Professor Cathart said:

"In the chemical works the girls employed were literally remarkable for their physique and the grace of their carriage. They all worked barefooted and carried out their various operations with greatest skill and ease. The astonishing thing was that most of these perfect young women no girl was employed under 16 years of age and bred in one of the worst districts of Glasgow. We saw one woman who had shovelled 20 to 25 tons of raw material to a height of two and a half feet in a day."

"In the case of the brickworks the work done was also very heavy. Although the girls were allowed to select their own load they carried as a rule more than 100 pounds a distance of 70 to 80 yards, while women who had barrows had normal loads of from four to four and a half cwt. One woman was found who moved 35 tons of material in a day, yet the good carriage of the women was noteworthy."

Girls, said Professor Cathart, reach their maximum strength at 18, but unemployed girls in tested groups were found to be of definitely smaller stature.

Girls at a college were found to be of greater height, weight and strength than either factory or unemployed girls, but could not compare in strength with the girls employed at the chemical works.

Has Faith in Canada

President Beatty of the C.P.R., Has Confidence in Future of Dominion

Addressing the Chamber of Commerce at Three Rivers, Que., E. W. Beatty, chairman and president of the Canadian Pacific Railway, summarized the factors "which should make us all very proud and very confident of Canada," and added to these a short summary of the needs of the Dominion.

The factors that had built up the country and which inspired confidence in its future were, said Mr. Beatty, first, a good system of democratic government, and, second, "a people noted for their level view of things, their lack of hysteria and their sanity in viewing and grappling with their own problems. These natural characteristics are backed by great resources heretofore undeveloped, and while it is probably scarcely necessary for me to restate what no doubt has already been stated, it is only proper that I should indicate what the sources of our future wealth are."

These were, he pointed out, agricultural lands producing the world's finest wheat and vast areas of equally good arable land as yet untouched by the plow, unlimited water powers, forest wealth and mineral possibilities, the potentialities of which were very great. Finally, he touched upon the question of climate. In this connection, he painted a glowing picture of the value to Canadians of their climate. "The clear, stimulating air of northern countries is not without its effect on the physical and mental alertness of the people of those countries," he said. "It's healthful qualities are a source of wealth. The company with which I am connected has capitalized in many ways to its great advantage both the country's climate and its scenery and in this, as in other things, one of the tests of its value in importance lies in the appreciation of those who do not have it to their own advantage."

Was Paying the Price

A recent visitor to an English prison discovered among the inmates a man whom he knew. This particular prisoner had been finally laid by the heels for swindling, though for quite a time he had cut a large figure in English public life. But there he was making snags.

"The visitor went up to him and said, 'Why how do you do, Mr. Bonimley? What are you doing—swinging?'"

"No—reaping."

Wilson: "Did the minister get very much when you got married?"

Brown: "No, and neither did I."

An Aid To Logging Industry

Gas Motive Power Gaining Favor in British Columbia

The logging industry of British Columbia is being revolutionized by gas motive power, and is rapidly replacing the logging engine and horse.

On the Pacific Coast, in the days before the gas engine, little log hauling was done by truck. There were several reasons. Trucks, in order to hold the mighty tree trunks, had to be of such solid construction that even when empty one of them was a pretty good load for a team. Good hauling roads were scarce, and as it took more than one team to haul a log load, truck loading was costly. It was a good deal easier and less expensive to build skid roads, grease them well and drag logs along them in "tunas"—that is, a dozen or so coupled end to end in a single line.

East of the Cascade mountains and in the pine country generally wagon and truck played a greater part in the transportation problem of the woods. This was owing to the trees being smaller, the logs being shorter and weighing less. But even there most of the hauling was done in winter by sled when snow covered the ground.

When gas trucks appeared, experiments were made with a view to fitting them into the log hauling problem, both over paved and unpaved roads. The result has been a type of truck especially suited to this kind of work. Now truck logging is a recognized and extensive branch of the logging industry. By the help of gas logging trucks, operators of small means have been able to log off isolated patches of timber owned by farmers or other private individuals that otherwise would have not been considered as lumber factors, and find a profitable market for the timber.

Logging authorities believe that in future gas trucks will do much of the work that is now done by locomotives. As lands are to be logged grow more rugged and precipitous through the march of the logging camps towards the mountains in search of stumpage, railroad building grows more expensive and difficult. The temptation will always be to use the rough roads and motor trucks rather than build railroads and operate costly locomotives.

Changes Program of Religious Teaching

Kemalist Government Working to Gain Religious Toleration

Turkey is quietly teaching itself a lesson in religious toleration. Though the orders have not been advertised it has become known that the government has instructed all Turkish public school directors to carry out a program of religious teaching which will not glorify the Moslem religion above all others, but show also the good points in other creeds.

Under the Sultans all the public schools were conducted by priests whose instruction consisted almost entirely of Koranic precepts. The new order of the Kemalist government is looked upon as implying application of a principle inherent in the Moslem religion, namely the recognition by Mohammed himself of Moses and Christ as prospects whose works should be heeded.

Treated With Artificial Sunlight

Violet Ray Pool Has Been Opened in Paris

The most curious bathing beach in the world has been opened in a basement in downtown Paris.

It is known as the "Aethological Institute," and is the first step in Paris' attack on the serious increase of rickets and tuberculosis among children. This increase is due to the lack of violet rays in the Parisian sunshine.

Under the glare of great mercury lights dozens of poor children, naked, except of a pair of goggles, play all day long in the white sand bordering an artificial pond. The walls are lined with aluminum, so that none of the heating rays is lost.

Not the Same Man

A colored man was charged with making whiskey illegally.

"What's your name?" roared the court.

"Joshua."

"And your other name?"

"That's all, sah—jest Joshua."

The judge eyed the prisoner a few moments and mused again.

"Are you the Joshua who made the sun stand still?"

"No sah; I'm de Joshua who made de moonshine."

John "Tut" he a marvellous do-later? So forgetful with his argument."

Allen: "You're the eloquent" "Well, I am."

Canadian Farmer Tells His Experience

"Les" Booth, widely known Ontario farmer, and a sick man for 20 years, suffered daily, only half alive. Now strong, robust, vigorous, credits new found health to Tamlac

Though popularly known as "Les," Mr. Booth's correct first name is George. His home is at 271 Perth St., Brockville. For the past three years he has enjoyed vigorous health but what he endured before then is best told in his own words. "For twenty years my arms, shoulders, back and hips, ached with rheumatism," said Mr. Booth. "Often I had to quit work entirely and I remember one had spell that kept me in bed for six months."

"My case got to be so chronic that the help ran the farm. I was practically helpless. Even my wrists and hands would swell up so that I couldn't write my name. I dreaded bedtime, for I got no rest, but lay there in agony, waiting for morning. Nervous spells would seize me and I would tremble all over like a leaf. I couldn't get any benefit from my food and had to force myself to eat. My weight was far below normal."

"Three years ago I decided to give Tamlac a good trial, for nothing else had helped me. I could scarcely believe such results were possible as these Tamlac soon showed. The aching stopped, my appetite came back and I added meat heartily. My nights became more restful, too, and I slept

soundly. I gained 16 pounds which I still retain, and I now work hard outdoors from 8 to 10 hours a day. I never have an ache. It's hardly believable! If folks want to know what Tamlac can do, tell them to write to Les Booth, or to come and see me. I'll tell 'em."

"If your health is broken from overwork or neglect, profit from Mr. Booth's experience. Try Tamlac, nature's own body builder, made from roots, herbs and barks. Your druggist has it. Over 52 million bottles sold."

Strange, Romantic Love Adventures of the Flapper you know

CHAPTER XXX. Continued
"That I wouldn't do," he declared promptly. "If you have any other reason than a sudden desire to enjoy my adventures without interruptions, I don't want to know it. I am jealous of my vanity."

"Then you shall be flattered," she returned gaily. "I am in the mood for you. Someday there's got to be a battle between us, between you and me, Roddy. Let's have it now."

He was on his feet in an instant and standing over her. She stopped with her eyes, and held him half bent down to her. She did not stir, nor put up a hand; it was just the indescribable something in her eyes.

"No, not just now," she said, her lips shaping into the utmost of their provocativeness. "You mustn't be too hasty. But tonight, perhaps, or tomorrow night—or when the moment arrives. But as soon as we can. I want to know how I'm coming off."

"Damn you! Are you playing with me?"

No, Roddy. I've never played. Not since my money came. Someday I want to play. After we've had our battle, perhaps. What shall we do first? Let's go through the mist to some place. Why no up La Turbie?"

"Tonight? That's what I must hurry home to change for. I shall want to look very alluring."

He straightened and looked down at her coolly for a moment. She did not flinch under his gaze, nor did her lips quiver. He turned away and looked out of the window. It was already darkening outside, and the

Mrs. L. Schooley

—Barnes' Studio

London, Ont.—"Ever since I saw the good benefit my daughter received from Dr. Pierce's Favorite Prescription during her second expectant period, I have never neglected the opportunity to recommend it to every prospective mother I was with my daughter when she was miserable and sick. Thru my advice she took Dr. Pierce's Favorite Prescription, and from the very beginning she gained in health and strength, was able to be up, and attended to her household duties right up to the last. She had comparatively no suffering—the least I ever witnessed. My only regret has been that I did not know of this wonderful medicine while bringing up my own family."—Mrs. Louisa Schooley, 505 Hill St. All dealers. Fluid or tablet form.

W. N. E. 1672

to the isolated resort above La Turbie village, but tripped on up the stairs. Brandon looked after her. Even women who were careless seldom went up La Turbie to dine or dance at the famous roadhouse atop the hill, unless in groups. The gayest of the hidden rendezvous along the coast, it was, in some respects, also the most forbidding. One always went up La Turbie but one did not, customarily, talk about it. After he had stood for a time in deep reflection, Brandon went onto the Amette veranda and peered out into the damp fog. As estimated as he was to the Riviera he estimated the feel of it to his nostrils and his fingers. He appeared in gain, from his conclusions, some definite satisfaction.

He summoned a servant and inquired if Mademoiselle Contant was still occupied in her boudoir. The maid reported that her mistress was, and would not be down for some little time. "You may tell her," he ordered, "that I shall not be staying to dine, if she won't mind."

A half hour later, when he had dismissed the Amette car which had taken him back to Monte Carlo, Brandon summoned his valet and demanded that a suit of heavy tweeds be laid out for him. When the man had complied his master ordered:

"Go at once to the garage of the Italian in the Boulevard du Midi and ask for Antoine. If he is not at hand find out where he can be reached immediately. When you have him say that I want him to drive me as soon as he can be ready up the mountain. If he objects to the mist, tell him the thicker the fog the heavier his purse will be, and that much more for his men. Be sure, however, that it is Antoine himself you find. Otherwise return quickly."

On her way to her own boudoir, Joanna stopped at Yvonne's. She too, it seemed, was particularly painstaking at her evening's toilette. Her maids were flushed and nervous under the temper of their mistress. That they were having difficulties in pleasing her was evident from the litter of glittering gowns angrily tossed into heaps on the chair's lounge, chairs and even tables. For a brief instant Joanna stood in the boudoir door, beneath the curtains that shut off Yvonne's sitting room; just long enough for her eyes to widen and narrow. Then she announced brightly that she would be going out with Knitworth and that she hoped her running away would not interfere with any plans for the evening Yvonne might have made. Yvonne glanced at her sharply. She concluded, however, that there had been nothing hidden in Joanna's tone. "I have no other plans than a run into the Casino, perhaps," she said.

"Benny Weymouth is having something or other tonight at her place, and I did promise that you and I would drop in, but that is not important. If you are running away by yourself I shan't trouble."

Joanna went over to the other woman and, stooping, lightly brushed her cheek with her lips. "Then I shan't be seeing you till tomorrow sometime. It will be early, though, for I shan't be able to sleep with tomorrow night so close." She stopped again at the door as she went out, to say, as if it were an afterthought: "Tonight I'm going up La Turbie—with Roddy. It will be great fun on the mountain tonight."

Yvonne turned quickly, but the girl had dropped the curtains behind her. She waved both of her maids away, when they bore down upon her with Joanna's departure, and sat quietly in a study. Presently she looked up into the mirror before her. She examined the reflection she saw there with an intent, abstract scrutiny.

From her face her gaze wandered to her throat, around which hung her most magnificent pearls, and then to her gown. She had chosen a thing of pink in orchid hues that had come

ECZEMA BROKE OUT OVER BODY

Could Not Do Any Work. Healed by Cuticura.

"Eczema broke out over my hands, arms, feet and limbs and on my body. It appeared in pimples that itched something awful, and when I scratched, it caused the trouble to spread. My arms and limbs were covered with sore eruptions. Whenever my clothing rubbed it, it would burn like fire. I could not do any work."

"I read an advertisement for Cuticura Soap and Ointment and sent for a free sample. I purchased one cake of Soap and one box of Ointment and within a month I was healed." (Signed) F. W. Simmons, Tawatinaw, Alta., Oct. 4, 1926.

Rely on Cuticura Soap and Ointment to keep your skin clear.

that day from her Paris couturier's. She shook her head, in response to her mental conclusions upon the ensemble the mirror reflected.

"You may take off the pearls," she commanded a maid, "and bring me diamonds. A lot of them. And I shall not wear this gown after all. It's too innocuous. I've something in burgundy; bring that." As if to herself she added, in a murmur that neither maid could overhear:

"Burgundy and diamonds. If I'm not mistaken that will do the trick."

(To Be Continued.)

Say Eskimos Came From France

Interesting Discovery Has Been Made by Canadian Geologists

Canadian geologists claim to have discovered that the Eskimo, now confined to the Arctic, originated in the South of France. This is one of the major successes of research made by Canadian scientists with the co-operation of the French Government, during little more than a year, and carried out largely on French soil, which it is considered has justified the organization of the Canadian School of Prehistory, and has laid the foundation for more extensive explorations in this field, both in Canada and abroad.

The director of the Canadian School of Prehistory is Dr. Henry M. Ami, F.R.G.S., F.R.S.C., etc., noted Canadian geologist. Professor Ami's quarters, in an Ottawa Government building, are headquarters for the work.

Digging at a site in the Dordogne department, France, a party of enthusiastic Canadians recovered skulls, bones, weapons and various implements which leave no doubt of the origin of the Eskimo and which enlarge considerably on existing theories regarding the manner in which North America was first populated.

When there were no Great Lakes, before Niagara gorge was worn below the normal surface of the earth, and when Ottawa was from 2,000 to 3,000 feet beneath a "cup" of snow and ice, that stretched as far South as New Jersey, prehistoric man followed the receding ice cap of Europe, northward to the border of the Arctic seas. Some remained to settle the northern countries, but the ancestors of the Eskimo followed the ice on, turning eastward across the northern rim of Europe and Asia and gradually came over the Behring Straits on to the northern Americas.

They went south then, spreading out over what is now Canada, but following the ice back towards the pole again, when it also began to recede with the gradually warming of the earth.

Fortune Came Too Late

Stefan Sandu, one of Rumania's best known burglars, is a millionaire. He received news of his good fortune while on his way to serve a 20 year prison term. He fell heir to 1,500,000 lei through the death of a relative but prison regulations prevent him from buying any prison comforts. The million and a half fortune represents only \$7,500 but by the time his term has been served compound interest will increase greatly Sandu's wealth.

Jerry—"Have you ever thought seriously of marriage?" Stranger—"Yeah! I've since the ceremony."

If a man doesn't know when to be silent he doesn't know when to speak.

Our Canadian Cabinet

Contains More Scotch Than Any Other Race, and Only One Englishman

Scotland now demands to be made a self-governing dominion, equal in status with the other dominions of the empire. This we gather from the monthly organ of the Scottish Home Rule Association, advocating, in Wilsoulan phrase, "self-determination for Scotland." Incidentally it is pointed out that while Britain's cabinet has only two Scots out of 21 (the Earl of Balfour, and Sir John Gilmour), Canada's cabinet contains more of Scots than any other race there being eight Scots out of 18, and only one Englishman. Here is the racial constitution of Canada's cabinet as given in the Scottish publication:

W. L. Mackenzie King (Scottish).
J. A. Robb (Scottish).
C. A. Dunning (English).
Ernest Lapointe (French).
J. C. Elliott (Scottish).
P. J. A. Cardin (French).
Charles Stewart (Scottish).
James Mahabon (Scottish).
Peter Hoeman (Irish).
Dr. J. H. King (Scottish).
Raoul Dandurand (French).
Fernand Binfort (French).
Lucien Cannon (French).
W. R. Motherwell (Irish English).
W. D. Euler (German).
P. J. Venot (French).
J. C. Sinclair (Scottish).

From the Montreal Herald

A SIMPLE TREATMENT FOR CHILDREN'S COLDS

Cold in the head is very common at this time of year, especially in the very young. Neglect of a cold is prone to lead to serious consequences. To relieve all congestion of the system is the first step in treating a cold, whether in infants or adults. For the very young, Baby's Own Tablets are the ideal means of doing this. Containing no narcotics or other harmful drugs they soothe the child's restlessness, relieve its suffering and ensure convalescence.

Baby's Own Tablets are without an equal for relieving indigestion, constipation and colic. They check diarrhoea, break up colds and simple fevers; promote health-giving sleep and make the dreaded teething period easy. The Tablets are the one medicine that a mother can give her little ones with perfect safety as they are guaranteed to be free from injurious drugs. They are sold by all medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Little Helps For This Week

Who gloth songs in the night. Job xxxv. 10.

To weary hearts that rest on Thee. Thy tenderest love is shown; And Thou hast many hidden joys And comforts for Thine own. And mountains of reviving strength The world has never known.

—T.H.M.

Any man can sing by day; but only he whose heart has been tuned by the gracious hand of Jehovah can sing in the darkness. The things of earth may satisfy for the hours of prosperity; but only the peace of God can give gladness in the darkness of adversity. God gives joy in sorrow; and when the sad one slugs through his tears, then the Lord comes out to him with new and more tender assurances, so that by his very hymn he is made more gladness. That which is born of trust rises into rapture.

William M. Taylor.

Found Queen's Tomb Empty
Dr. George A. Reisner, assistant professor of Egyptology of Harvard University, opened the tomb containing the sarcophagus of Queen Hehperes, mother of Cheops, builder of the great pyramids, says an Exchange Telegraph despatch from Cairo. It was found that the sarcophagus was empty.

No man is truly good who is only so for the sake of praise.

Planning Airplane of Unprecedented Speed

Italian Engineers Hope to Evolve Entirely New Type

Application to aviation of the principles used in the shooting of Paris by the long range "Big Bertha" of the Germans is being studied by a group of the most prominent aeronautical engineers in Italy.

They hope to evolve an entirely new type of airplane of unprecedented speed. They think even possible for it to fly from Rome to Buenos Aires in ten hours.

Like the shells of the "Big Bertha," the projected plane is to fly at enormously high altitudes. A catapult start is to enable it quickly to soar to a height of 8,000 meters or more, after which its gigantic motors are expected to hurl it through the rarefied air at record speeds.

CANCER

Great Success of Cantassium Treatment

A well known London surgeon and recognized authority on Cancer has stated: "I would have interest in the discovery that Cancer is due to a deficiency of potassium salts" in the body, which causes the cells to break down and become malignant."

In order that every one may learn

The Real Cause of Cancer

a remarkable book has been specially written.

This book will be sent free to patients or any one who is interested in the new and scientific method of fighting "THE CANCER SOURCE."

The following is a list of the chapters: 1. The Lin Treatment of Surgery; 2. Some Doctores Oppose the Operation; 3. What Cancer Is; 4. Why the BODY CHANGES BREAK DOWN; 5. Deficient Cooking Methods; 6. Common Errors in Diet; 7. Aerial Elements of Food; 8. At least 12 elements of the Body; 9. The Chief Minerals of the Body; 10. The Thyroid Gland; 11. How When Lungs Begin to Accumulate; 12. Potassium Cancer Line Treatment; 13. Great Value of Potassium; 14. Parts of the Body Liable to Cancer; 15. Parts Which Are Subject to Cancer; 16. How a Doctor Can Help; 17. How to Avoid Cancer; 18. Prevalence from Cancer; 19. Aerial Elements and Old Age; 20. Rheumatism, Gout and Kidney Complaints.

With this book are a number of interesting case reports proving the great value of "Cancer Treatment" in various cases. The treatment is simple and inexpensive, and can be easily taken in one's own home. Apply for a book to Charles Walter, 51 Brunswick Avenue, Toronto, Ontario, Canada.

Rasmussen Made Big Money From Hogs

The value of livestock as a source of revenue in connection with wheat farming is being proven here by men who are becoming prosperous due to their appreciation of the excellent advice given by experts on diversified farming.

George Rasmussen hauled in eight hogs that brought him the sum of \$231.25.

The care required to raise these animals is small compared with the gains. During the fall and winter these hogs were running in the stubble field, cleaning up the wheat heads left in the stubble and rooting the base of straw stacks.

It required only three weeks of actual feeding to fatten these animals and to bring their average weight up to 312 pounds. The hogs were slightly over a year old when sold.—Herald.

E. E. Peterson Dead

Word was received by William Selman on Saturday that E. E. "Montana" Peterson, died at Kalispell last Thursday, March 21.

Mr. Peterson has resided here for many years and was highly respected by all who knew him. His chief occupation was thrashing. He, with his son William, during the last seven years have

Roberts Sells Carload Steers At Big Profit

A carload of steers shipped by I. B. Roberts last Saturday to buyer Fleming, Calgary, sealed an average weight of 1229 pounds each. On these 29 head of 3-year-olds Mr. Roberts netted an average profit of \$20 a head. He purchased them last fall from Meeks Bros. at 5 1/2 c. l. w. The price received was 7 c. l. w. The steers made their largest weight gain on beet tops which were fed up to January 15. After this date their rations were made up of straw, alfalfa, pulp and molasses. From the foregoing it is apparent that the farmer who is not prepared to utilize the feed value of beet by-products is losing the cream of the beet industry; he is missing an opportunity of turning idle winter days into money-yielding months.

become widely known for their efficiency in thrashing grain, and this announcement will be regretted by a host of friends of the deceased.

No definite cause of his death was given, except that he suffered a stroke last December. He was visiting his brother at Kalispell and had planned to return here in April.

He is survived by the widow and one son. His age is about 62 years. Burial will take place in Kalispell.—Herald.

Beet Growers Should Start Work Early

Some beet growers have already harrowed their beet land twice this spring. Others have not yet awakened to the fact that spring-time is here, and that the soil should be stirred up so that it will become aerated and warmed by the sunshine, and drifting and baking prevented.

What was done with the land in 1926 will largely determine how it should be handled this spring. However, it should be cultivated harrowed or disced just as early as the soil will permit the farm tool used to work in it without injuring its mechanical condition.

The following suggestions may be helpful in preparing our land for the beet drill this season:

SUMMERFALLOWED LAND should be harrowed with a spike-tooth harrow weighted or ridden by the teamster, then levelled and harrowed at least twice and more if necessary to bring the moisture close to the surface.

OLD BEET LAND should be double disced early and harrowed once or twice to work the vegetable matter and manure lying on the surface into the soil. Before this fertilizing material flows away. If the soil is too compact it should be plowed and care being taken to turn the plow immediately with the harrow and packer to conserve the moisture. After these operations treat the same as suggested for summer-fallow land.

STUBBLE LAND should be thoroughly disced to break up the stubble and work it into the soil then plowed, packed, leveled and harrowed, harrowing to be done a sufficient number of times to make a thoroughly good seed bed with moisture within one inch of the surface. However, we do not recommend planting stubble land to beets with the expectation of heavy yields unless the soil is fairly rich in available plant food.

These suggestions worked out with good horse sense as early as possible will bring results satisfactory alike to the grower and factory.

Mrs. J. F. Anderson is requesting contributions of used books and magazines to be sent to inmates of the Keith sanitarium, Calgary, and the Lethbridge jail.—Board of Visitors Provincial Institutions.

News Notes

Tentative referees for the big basketball games here tomorrow and Monday night are Golden Woolf of Magrath and Hod Semmens of Lethbridge.

The U. F. W. A. will hold a hot cross bun dance in the Opera House Friday, April 15.

Send the kiddies to the prize matinee Saturday. Milton Sills in a "Sheik" picture, and also a two reel comedy. Watch for "The Devil Horse."

Spring horse shows and bull sales are the order of the day in Alberta. The Calgary Horse Show and Bull Sale is on next week and that of Edmonton the week following.

The first game of the western basketball eliminations was played at Regina Wednesday night resulting in a win for Winnipeg Toilers by a score of 45-24. This practically precludes all possibility of Regina winning the series and the chance to play Raymond. The score of the second game at Regina was not available for this issue.

FOR SALE—Fairbanks 2 gas engine 3 h. p. New 1925. Latest model. A1 condition. Also power lift Case plow, 3 stubble and 2 soil bottoms. Good as new.—J. Hervey, blacksmith, Raymond.

TO RENT—One large room furnished for light housekeeping. Also two rooms unfurnished.—Apply Mrs. E. S. Witbeck, phone 84, Raymond.

9 to 12 1.30 to 6

It has been long since Alberta farmers faced a brighter outlook for spring than that before them.

Leon Galloway, boiler man, resigned his position with the sugar company, and with his wife and family left Thursday for Utah.

Fred Romeril returned last Wednesday from a short term mission spent in the Southern States.

Were you April fooled this morning?

In two hundred clinics held by the nursing branch of the public health department of the Provincial Government, in three cities during 1926, the total attendance of infants and pre-school age children was more than 10,000. The average attendance at the clinics was 39, that at the Calgary clinics was 49, and at the Medicine Hat was 33.

The Canadian Manufacturers' Association with over 700 delegates, will hold its annual convention in the west this year, meeting at Calgary, Alberta, in June.

The Canadian Wool Growers' Association is to meet in convention in Lethbridge, April 1. Col. McEwen, president, will preside. Nearly 200 delegates are expected to be in attendance.

Tourists coming to Alberta by car may now stay sixty days under permit, instead of thirty days, an amendment to the regulations in this respect having been made at Ottawa.

A feature of the Edmonton Exhibition this year will be another historical pageant, commemorating the diamond jubilee of the Dominion.

J. M. Neal and son have taken over the Canadian Oil Ltd. agency.

The Business of Agriculture

Farming is more than an occupation; it is a highly commercialized business which requires careful planning and thoughtful execution. Bountiful production is necessary but much effort is wasted unless the business of disposing of the year's output is properly managed. In conducting the business of the farm the Standard Bank can play a prominent and useful part. Consult the manager and learn how true co-operation builds a more prosperous community.
